ABOUT US

DAR INSOLATION Contracting Establishment was founded in 2010 in the name of Abdurrahman Al-Bishi EST in 2016 it is changed to DAR INSOLATION EST. Since establishment, we worked at different projects. We have commitment for supplying a very honest and professional service. As an independent establishment, we always choose the appropriate products to fit the required properties for the specified work conditions.

Because leaks are typically the result of improper installation, we train all staff in-house very well to achieve high quality and customer satisfaction. If it needs waterproofing we know the best system for the job and we are qualified to design and install it for you!

OUR VISION

Our vision is to have a leading position in our field among the GCC, and to be a key business partner in local market of Saudi Arabia

OUR MISSION

Is to help others achieve their targets by providing proper engineering solutions and participate in improvement of working conditions through our commitment for supplying a very honest and professional service at reasonable competitive prices.

DAR INSULATION ORGANIZATION

OUR MAIN ACTIVITIES

We provides our services in eight major activities :-

- ***Waterproofing***
- ***Heat Insulations***
- ***Light Weight Foam Concrete***
- ***Perlite***
- ***Concrete Repair***
- ***Rehabilitation Of Buildings***
- ***Polyurethane Spray System***
- ***Coatings And Flooring System.***
- ***Polyurea Insulation Coating .***

MAIN WATERPROOFING AREAS

Our main waterproofing activities include the following:-

Bridges water proofing systems .

Basement water proofing systems .

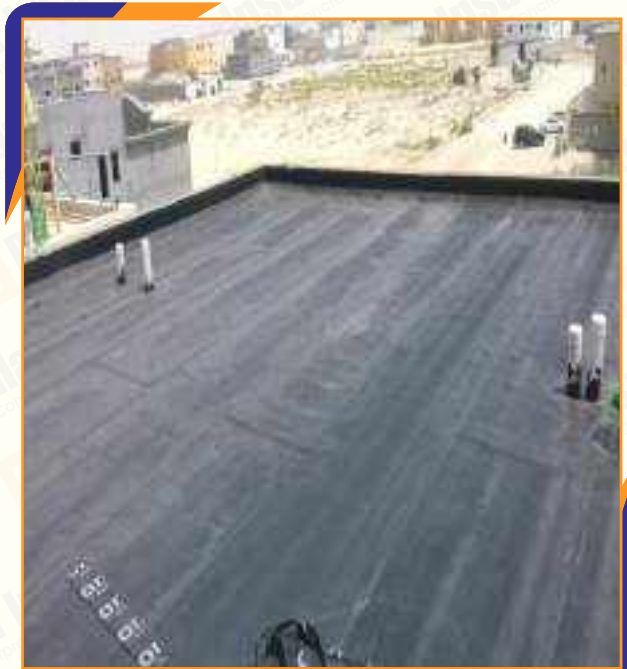

Retaining walls (waterproofing and protection)
and Roofs waterproofing systems .

Wet areas waterproofing systems .

Swimming Pools and water tanks water proofing
systems .

Applied mem-
brane deck water-
proofing .

Leak stopping
systems .

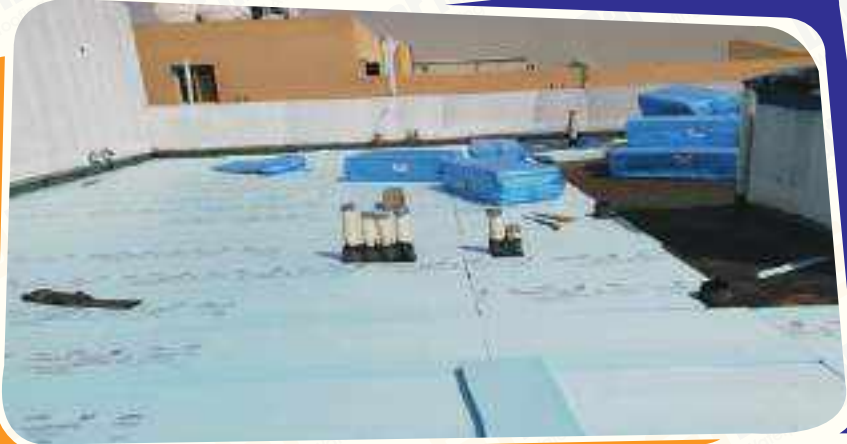

WATERPROOFING

- We design and fix water proofing for all types of new structures as well as remedial of the existing one. As specialist applicator we investigate leaks at existing structures and specify and carry out remedial repairs. We use many types of waterproofing systems such as:
 - Bituminous Membrane system
 - PVC system
 - Cementitious systems
 - EPDM membrane
 - Polyurethane spray system
 - Epoxy coating system
 - Acrylic coating systems.
 - HDPE system

POLYSTYRENE BOARDS

- We provide full system for heat insulation. we use polystyrene boards high density (32-35 kg/m³) from different manufacturers and range of thicknesses (5, 7, 7.5, 10 cm) to provide the best heat insulation system at roofs .

POLYURETHANE SPRAY

We have Avery good experience in polyurethane foam spray With Deferent Thickness (4cm-5cm-10cm) Or Any Thickness Required beginning from preparation of roof decks, foaming and final acrylic coating with water testing for roofs .

LIGHT WEIGHT CONCRETE

We design and cast light weight foam concrete and also perlite concrete. This type of concrete is mainly used in flat surfaces to provide drainage slope with light weight of loads to the structures at the top roofs. It can be made with different densities depending on the engineering requirements and design of the structure.

CONCRETE REPAIRING

We are expertise in repairing of different parts of concrete buildings as well as bridges including; Beams, girders, Columns, Slabs and foundations.

REHABILITATION OF BUILDINGS

- When it comes to Rehabilitation of an old building, the right thing is to call DAR INSULATION for a very professional teams and reasonable cost .

WATERPROOFING FOR WET AREAS

We have many types of coatings such as:

Acrylic coating for exposed roofs, wet area and above polyurethane spray system.

Cementitious coating for wet areas, swimming pools, water tanks and

Others.

PU and bituminous coating for wet area and roofs.

FLOORING EPOXY SYSTEM

We

applying all types of epoxy such as:

Parking epoxy Epoxy for internal of
Sewage and potable water Epoxy for ware-
houses, stores, malls and markets

PERLITE ROOF INSULATION

Perlite is a quality product used as roof insulation material under waterproofing system having the properties of fire resistant ,light weight , thermal insulation, high strength , noise absorption, non-toxic, inorganic, non-combustion ,quick installation and economical

The perlite ore is crushed, dried and graded. When perlite are grains are abruptly subjected to immediate heat near to their softening point 930 C the combined water rapidly vaporize causing them to expand 4 to 20 times their volume. The expansion process creates countless air voids in the grains which account for the lightweight insulating properties of expanded perlite because of these unique properties, perlite is used in the manufacture of masonry wall insulation, under floor insulation and roof deck insulation etc.

As thermal insulation, expanded perlite gives excellent results at temperatures ranging from very low to very high. Perlite concrete can be made with dry density of 340 kg/m³. The lower density the higher the insulating value.

The perlite can also be used in areas where the foam concrete operations are not practicable. Also covering perlite by sand cement slurry topping, provides a solid base for roofing system. It can also be laid to high slopes more than 1% which is a limitation with foam concrete.

SPECIAL FEATURES OF PERLITE ROOF INSULATION:

- * Thermal Insulation
- * Fire Resistant
- * High Strength
- * Quick Installation
- * Economical
- * Light Weight
- * Noise Absorption
- * Permanent
- * Dimensional Precision

Perlite operations are common with ASE, and have privilege of executing jobs with this material, being approved agents of Saudi Perlite.

ASE has qualified TECHNICIANS to lay the PERLITE PROFESSIONALLY and lay up to the required specifications and standards, under supervision of qualified experience engineers.
